SUMMARY

Full-stack Developer with strong experience in Next.js, NestJS, TypeScript, and REST API development. Built 3 projects and delivered responsive, maintainable features with authentication, CRUD, and map integration. Seeking a Fresher Full-stack role focused on scalable web applications.

WORK EXPERIENCE

Feb 2023 – May 2023

Company: Hexagon (FWD Insurance)
Position: Front-End Developer intern
Developed UI pages based on Figma designs.

- Built a year-based statistical chart interface using JavaScript/TypeScript.
- Designed a user information and contract benefits interface.
- Implemented automatic PDF export for the full contract and benefits view when users access the contract details.
- Developed client-side authentication pages for login and registration, integrated with the appropriate API.

02/2024 – 04/2026

Company: Viet Duc International Investment Co., Ltd.
Position: Business Analyst

- Conducted business analysis and gathered requirements from various departments to develop suitable technology solutions and optimize operational processes.
- Developed MES (Manufacturing Execution System) features to enable real-time monitoring of production, progress, and stage status.
- Supported the development of manufacturing-specific software.
- Asset Management: Monitored and reported on the status of machinery, ink supplies, and equipment malfunctions to identify replacement needs.
- Technical Support: Provided troubleshooting and support for issues related to computers, ERP software, LAN/Wi-Fi networks.

PERSONAL PROJECT

Blog website:

- Tech Stack: Node.js (Express), REST API, MongoDB, React.js.
- Github
- Built a web application that allows users to post short video blogs for other members to view.
  - Developed a fully responsive website compatible with all devices, including a homepage and blog section.
  - Developed a responsive blog platform with CRUD features for posts.
  - Built REST API integration with Node.js, Express, and MongoDB.

IT Asset Management System

- Tech Stack: React.js, Next.js, NestJS, TypeScript, SQL Server, TypeORM, JWT, REST API, Styled-components, i18N.
- Frontend | Backend API
- Built a dashboard-based web application for managing IT assets, employees, departments, and master data.
  - Developed responsive management screens for employee records, department structures, and organizational levels.
  - Implemented CRUD operations, search, filtering, pagination, and status management across frontend and backend.
  - Built REST APIs with NestJS and SQL Server to manage employees and shared master data, including asset categories, suppliers, locations, warehouses, licenses, and maintenance cycles.
  - Implemented JWT authentication and role-based permissions for administrators and employees.
  - Integrated employee account creation and password reset workflows, with passwords stored as bcrypt hashes.
  - Connected employee department selections to department-level data, displaying department names while handling the corresponding IDs.
